Part III DETAILED ACTION

Claims 1-24 are pending.
 The following is a quotation of the first paragraph of 35
 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-24 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a fusion protein comprising a first element that specifically binds to pancreatic acinar cells, wherein said element is selected from the group consisting of SEQ ID Nos 2-6, does not reasonably provide enablement for any binding element able to specifically bind a pancreatic cell surface marker. The specification does not enable any person skilled in the art to which it pertains, or with which it is most clearly connected, to use the invention commensurate in

scope with these claims.

Applicant's claimed invention is drawn to a composition for treating acute pancreatitis. However, by creating a fusion protein that specifically binds any pancreatic cell surface marker the scope of Applicant's claimed invention would include targeting cells in the pancreas that are not involved in acute pancreatitis, such as ductal cells, the alpha, beta and delta cells of the islets of Langerhans. For Applicant's claimed invention to predictably work, Applicant's claims would necessarily be limited in scope to targeting acinar cells, which Applicant's own specification are responsible for causing acute pancreatitis. Furthermore, since Applicant's prophetic specification is limited in the recitation of which binding agents can bind the acinar cells specifically, SEQ ID NOS 2-6, and there is no more specific guidance besides these sequences in practicing the invention, it would be unpredictable and require an undue amount of experimentation to practice the full scope of Applicant's claimed invention drawn to any binding agent.

- 3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick Nolan whose telephone number is (703) 305-1987. The examiner can normally be reached on Monday through Friday from 8:30 am to 4:30 pm.
- 4. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Christina Chan, can be reached at (703) 305-3973. The FAX number for our group, 1644, is (703) 305-7939. Any
